Sequence 27, Application US/08479078

Sequence 27, Application US/08479078

Patent No. 5814466

GENERAL INFORMATION:
APPLICANT: Pawson, Anthony
TITLE OF INVENTION: Method for Assaying for a Substance that
TITLE OF INVENTION: Method for Assaying for a Substance that
TITLE OF INVENTION: Method for Assaying for a Substance that
TITLE OF INVENTION: Affects an SH2-Phosphorylated Ligand Regulatory System
NUMBER OF SEQUENCES: 27
CORRESPONDER EADBESS: AREA OF STATE: Ontario
COUNTRY: Canada
ZIP: M5H 372
COUNTRY: Canada
ZIP: M5H 372
COMPUTER READBESE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: Floppy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-08-311-731A-185

Sequence 185, Application US/08311731A

Patent No. 658326A

GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS

APPLICANT: SMITH, DOUGLAS

TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR
                                                                                                                                                                      ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                d
                                                     Sequence 16536, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICAN.

TITLE OF INVENTION: FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 107196.132

FILE REFERENCE: 107196.132

PRIOR RPELICATION NUMBER: US 60/074,725

PRIOR PELICATION NUMBER: US 60/074,725

PRIOR PILING DATE: 1998-02-13

PRIOR FILING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 1636
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 79, Application US/08311731A

Sequence 14343, Application US/09248796A

Patent No. 6747137

GENERAL INFORMATION:

APPLICANT: Keith Weinstock et al

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO CANDIDA ALBICANG

TITLE OF INVENTION: NUMBER: US/09/248,796A

TITLE OF INVENTION: NUMBER: US/09/248,796A

CURRENT APPLICATION NUMBER: US/09/248,796A

CURRENT FILING DATE: 1998-02-13

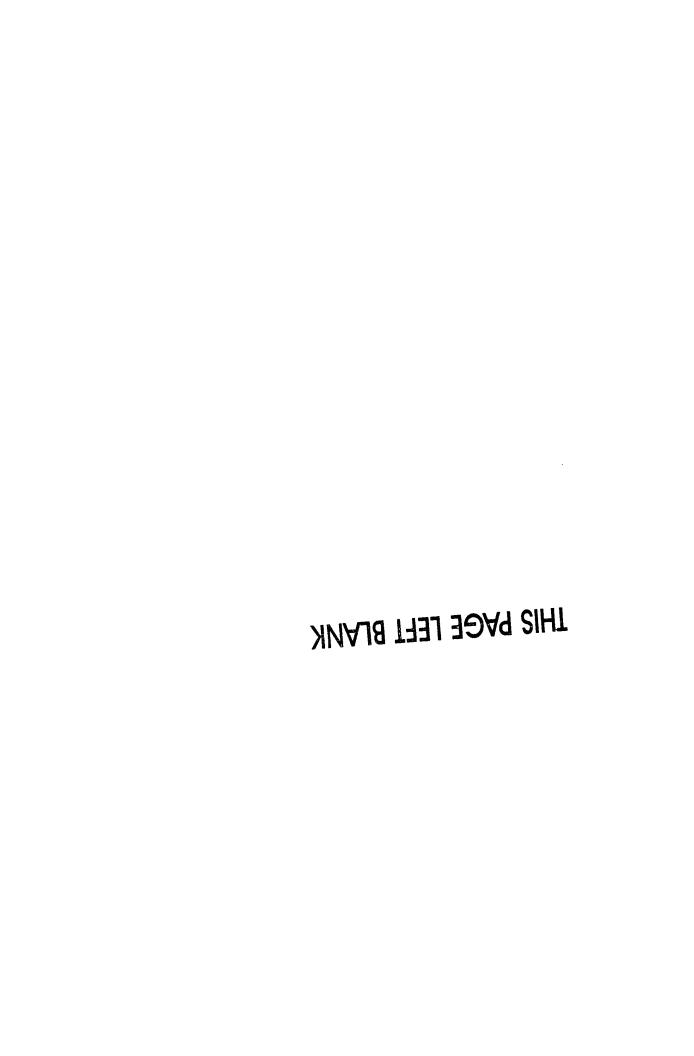

PRIOR PELING DATE: 1998-02-13

PRIOR PELING DATE: 1998-08-13

NUMBER OF SEQ ID NOS: 28208

SEQ ID NO 14343

LENGTH: 143
                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

APPLICANT: Trang, Maria
APPLICANT: Trang, Maria
APPLICANT: Loper, John C.
APPLICANT: Loper, John C.
APPLICANT: Geneson, Martin
TITLE OF INVENTION: CYTOCHROME P450 MONOOXYGENASE AND NADPH CYTOCHROME P450 OXIDOREDUC
TITLE OF INVENTION: GENES AND PROTEINS RELATED TO THE OMEGA HYDROXYLASE COMPLEX OF CFI
TITLE OF INVENTION: TROPICALIS AND METHODS RELATING THERETO
FILE REPERENCE: 1010-12
CURRENT APPLICATION NUMBER: US/09/976,800
CURRENT FILING DATE: 2001-10-12
NUMBER OF SEQ ID NOS: 118
SOFTWARE: Patentin version 3.1
SEQ ID NO 106
LENGTH: 267
                                           Sequence 24, Application US/09911781
Patent No. US20020034788A1
GENERAL INFORMATION:
APPLICANT: Craft, David L.
APPLICANT: Birich, Dudley
APPLICANT: Application USE OF CYP52A2A PROMOTER TO INCREASE GENE EXPRESSION IN YEAST
TITLE OF INVENTION: USE OF CYP52A2A PROMOTER TO INCREASE GENE EXPRESSION IN YEAST
FILE REPERENCE: U0012 OS/0AAP (1010-49)
CURRENT APPLICATION NUMBER: US/09/911,781
CURRENT PILING DATE: 2001-07-24
NUMBER OF SEQ ID NOS: 34

GENERAL INFORMATION:

APPLICANT: La Rosa Thomas J

APPLICANT: Covalic David K

APPLICANT: Cov Yongus

TITLE OF INVENTION: By Nucleic Acid Molecules and Other Molecules Associated With

TITLE OF INVENTION: Blants and Uses Thereof for Plant Improvement

TITLE OF INVENTION: 153223 Brants and Uses Thereof for Plant Improvement

CURRENT APPLICATION NUMBER: US/10/424,599

CURRENT FILING DATE: 2003-04-28

NUMBER OF SEQ ID NOS: 285684

SEQ ID NO 262409
